

# SAFESPOT INTEGRATED PROJECT - IST-4-026963-IP

## DELIVERABLE

### SP4 – SCOVA

## User Needs and Requirements

Deliverable No. (use the number indicated on technical annex)		D4.2.4	
SubProject No.	SP4	SubProject Title	SCOVA
Workpackage No.	WP2	Workpackage Title	Needs and Requirements
Task No.	4	Task Title	User Needs and Requirements
Authors (per company, if more than one company provide it together)		Volvo Technology	
Status (F: final; D: draft; RD: revised draft):		F	
Version No:		1.2	
File Name:		SF_D4.2.4_User Needs and Requirements V1.2.doc	
Issue Date:		19/02/2007	
Project start date and duration		01 February 2006, 48 Months	

## EXECUTIVE SUMMARY

This deliverable D4.2.4 called “User Needs and Requirements” describes elaboration and results from an analysis of the user needs and requirements for the SP4 Applications.

For the elaboration of the user needs and requirements a methodology defined by SP7 has been used. The activity flow applied for the elaboration of SP4 user needs and requirements is described.

The user needs and the requirements have been elaborated, compiled and harmonized for the SP4 applications. The resulting collection of the SP4 user needs and requirements are presented in this document. The requirements are addressed to the different SPs, responsible for implementing different parts of the SAFESPOT system. Each SP should evaluate and may accept or refuse these requirements. The most important requirements are those who are common to several applications and have the relevance classification ‘critical’. Further harmonization of the requirements, both within SP4 and between the different SPs, could decrease the number of requirements. The concerned SPs can use the SP4 requirements as input to the specification phase WP3 of the project.

An overview of the demonstrators, hosting the SP4 applications, is showed in an annex of the present deliverable.
